

GROUP OF NOTIFIED BODIES UNDER COUNCIL DIRECTIVE 89/106/EEC

Report for the 4th quarter 2007 and 1st quarter 2008

1 Group of Notified Bodies (GNB) activities

1.1 General

Nearly all of the GNB-CPD sector groups are active, and are continuing to draft position papers. Fifty five sector group position papers have been published in NANDO and on CIRCA to date. Sector groups and their working groups hold about Sector groups and their working groups hold a total of about 35 meetings per year, in addition to work between meetings carried out on CIRCA.

Co-ordination with CEN TCs continues to result in certain aspects of the content of some sector group position papers being incorporated into revisions of the harmonized standards.

An overview of published GNB-CPD position papers, and those under development, is presented in the annex to this report.

1.2 Revision of Advisory Group position paper on the use of manufacturer's testing facilities by NBs

The GNB-CPD Advisory Group has revised one of its horizontal position papers, now NB-CPD/AG/03/005r1 *'The use of manufacturer's testing facilities by NBs'*. The revision brings the paper into line with Commission Guidance Paper 'M'; the previous edition was more restrictive concerning the conditions under which manufacturer's testing facilities might be used than the subsequent GP 'M'.

2 The role of NBs in sharing ITT results, particularly under AoC system 3

At recent Sector Group meetings, there have been concerns about the roles that harmonized standards written to conform with Commission Guidance Paper 'M' assign to notified bodies (NBs), and particularly to notified test laboratories.

A chapter within GP 'M' seeks reduction of initial type testing (ITT) test costs, by sharing of ITT results. The principle of avoiding unnecessary testing is laudable. For attestation of conformity (AoC) systems that require the intervention of a NB in the ITT, GP 'M' proposes that the NB should be required to verify the conditions for sharing, which include that the product has the same characteristics relevant for performance as the one subjected to ITT. But under AoC system 3 such judgements are generally outside the notified competence of test laboratories, as it depends on aspects of which test bodies are not expected to have information (eg production process, handling and storage).

3 Responsibilities of NBs and others for certificates when hENs are amended or corrected

The GNB-CPD Advisory Group has been seeking internal agreement for some time with regard to the responsibilities of NBs, particularly in respect of certificates, when amendments or corrigenda to harmonized standards are cited in the OJEU. At the latest, 23rd Advisory Group meeting, the principle that the certificate was the manufacturer's property was considered. On this basis, NBs would issue a certificate referring to a currently cited version of a harmonized standard. If versions change, it would be the manufacturer's responsibility to request an updated certificate if he requires one. A proposal along these lines will shortly be submitted to the Commission for comment.

4 False "certificates"

A number of "certificates" have come to the attention of the GNB-CPD which are designed to look similar to genuine notified body certificates, but without key elements such as a notified body number. GNB-CPD Technical Secretariat is compiling a dossier on such documents and will report back to the Advisory Group.

5 Issues relating to the citation of harmonized technical specifications

5.1 Historic information on the timetable for CE marking

Previous editions of the OJEU give a clear historical record of when it became possible and then obligatory to CE mark to a particular version of a hEN, and when it was necessary to use the next corrected, amended or revised version of that hEN. The only such information given in the latest OJEU (2007/C 290/12) is the "Date of cessation of presumption of conformity of superseded standard", which appears to be identical to the CEN "Date of withdrawal", but not always the same as the date of the end of the coexistence period between CE marking to successive versions of the standard.

The NANDO website database shows the current date of applicability and date of the end of the coexistence period for harmonized standards, but it does not yet display a historic record, that would allow interested parties to check what the situation was at a particular time in the past.

At the 23rd GNB-CPD Advisory Group meeting, the Commission explained that historic information was held in the NANDO database, and would be made publicly available.

5.2 Cited harmonized standards missing or incorrectly listed on the NANDO website

The NANDO website was updated following the latest OJEU citing standards harmonized under the CPD, published 13 December 2007, but about a dozen hENs were inadvertently omitted.

The absence of these hENs is causing severe problems for manufacturers wishing to CE mark

those products, and NBs wishing to be notified for that work. At the 23rd GNB-CPD Advisory Group meeting, the Commission said that, pending the addition of these standards to NANDO, it would be acceptable for notifying authorities to notify bodies by letter or email to the Commission against the missing hENs. The NB could then use a copy of this letter to demonstrate its notification to actual or potential clients. However, this procedure is understood not to be acceptable to some notifying authorities, and lack of transparency makes it unsatisfactory for all parties. The GNB-CPD requests that NANDO be corrected with all possible speed.

5.3 Publication of ETAGs on the NANDO website

A number of published ETAGs have not been entered in the NANDO website. This causes equivalent problems to those arising when cited hENs are missing from the NANDO website. The GNB-CPD Advisory Group requested in its previous report to SCC that all outstanding ETAGs be notified on NANDO soon. However, no further ETAGs appear to have been added to the website.

6 Revision of the New and Global Approach and of the Construction Products Directive

The GNB-CPD Advisory Group welcomes most aspects of the New Legal Framework legislation, and the flexibility it permits for the revision of the CPD.

With regard to the revision of the CPD, GNB-CPD Advisory Group welcomes the proposed change from a Directive to a Regulation, since this can be expected to improve the extent to which NBs work equivalently. However, there is concern that many of the problems in implementing the CPD have arisen from ambiguities which may not be adequately resolved by the new proposals. A good example is cumulative attestation of conformity. Also, some of the proposed changes in the terms used and the procedures required may be a distraction, because the current terms and procedures are now becoming understood and accepted. Also, it is still not clear to what extent the harmonized technical specifications may need to be modified to implement the proposals.

The GNB-CPD is concerned that the early requirement for all NBs under the CPR to be accredited has been removed from subsequent drafts. We hope that the requirement for accreditation will be restored.

The GNB-CPD also welcomes the statement that Member States shall ensure that NBs participate in co-ordination activities. However, a requirement that Member States should ensure that NBs follow guidance that may result from the co-ordination process, would be seen as a further improvement.

7 Issues addressed in CONSTRUCT 06/761

The GNB-CPD Advisory Group, in its report to the 65th SCC meeting, urged the Standing Committee on Construction to decide on the status of document CONSTRUCT 06/761. There are two issues addressed in this document which are particularly important for notified bodies:

- Cumulative attestation of conformity (AoC) systems

Notified bodies can make widely different interpretations of the breadth of their activities that their certificates should cover, particularly for products with characteristics at different systems of AoC. Different interpretations may arise from national traditions and strongly held views in Member States. The GNB-CPD has been requesting SCC for a resolution of this problem for some time. CONSTRUCT 06/761 §4 proposes a resolution of the interpretation of AoC systems by means of third-parties certifying only the relevant characteristics rather than the whole product. Should the GNB-CPD be instructing its members to operate in this way, and should future versions of harmonized standards be drafted to make this explicit?

- Manufacturer's declaration of conformity

CONSTRUCT 06/761 §5 interprets the CPD as not requiring a manufacturer's declaration of conformity under AoC systems 1+ and 1. The GNB-CPD believes that the ambiguity in the CPD on the matter allows the current GNB view that a manufacturer's declaration should be produced, whatever the system of attestation, as it benefits all and provides a clear and consistent message.

The GNB-CPD once again requests SCC for guidance for standards writers and NBs on these important issues.

Jirí Sobola
President of the Group of Notified Bodies
2008-05-09

NOTE 1 Development stage X with text struck through indicates a superseded version of a document.

NOTE 2 Development stage Y with text struck through indicates a paper on which development has ceased, for instance because the objective of a SG PP has been incorporated in a modified version of a standard. (However, papers on which development has ceased were not retained in this document before 2008.)

NOTE 3 Development stage Z with text struck through indicates a paper which was published but has since been withdrawn.

NOTE 4 These totals count the latest published version of documents, and additionally revisions under way, but superseded versions of documents are not included. There may be some double counting between one or two SH02 documents and those in the vertical SGs.
